Innovation for place-based transformations: ACTIONbook, practices and tools published

Co-creation for action

chapter:
Engaging

activities:

Identifying stakeholders for given societal goals
Continuously engaging with stakeholders
Setting up a network governance
Building legitimacy

chapter:
Designing

activities:

Developing a strategy
Developing the policy and action mix
Mobilising resources
Designing ecosystem support
Designing local missions

chapter:
Envisioning

activities:

Diagnosing and developing a vision
Conducting participatory foresight
Developing transition pathways and roadmaps
Setting milestones and targets

chapter:
Implementing

activities:

Deploying a strategy
Coordinating the policy and action mix
Prioritising funds
Experimenting and demonstrating
Scaling and mainstreaming

chapter:
Orchestrating

activities:

Agenda setting and sharing
Enabling multilevel cooperation
Collaborating across departments
Collaborating across territories

chapter:
Learning

activities:

Managing and transforming knowledge
Continuous monitoring
Evaluating impact
Learning from experimentation
Mobilising competences

chapter: **Envisioning** / activity:

Diagnosing and developing a vision

WHAT ▪ This activity seeks to answer the question: **'Where are we now and where can we go from here?'**. It does so, initially, independently of where we want to go. A diagnosis can have many aspects. It can look at how the system performs now to gain an understanding of its strengths and weakness. It can also look prospectively at opportunities and threats, which also means looking outside the system and into the future. This is how vision development begins, and it should feed into a broader process of engagement, deliberation, alignment, exploration and a conscious pursuit of positive transition pathways. **System-level innovation**, or territorial transformation, is the far-reaching reconfiguration of a system to serve new or changed societal needs in response to a strong impulse for change. Therefore, to identify promising pathways, it is important to match territorial assets with strong impulses for change. Some of these will be global impulses, typically referred to as megatrends (e.g. sustainability, geopolitical tensions, emerging technologies), whereas others will be local.

WHY ▪ **Diagnostic methods** are necessary to inform policy debates about transformation. Good diagnostics can help you to act as focusing devices, targeting limited policy attention and resources. Diagnostic tools and methods aiming to address transformation require looking in detail at specific needs to create new anticipatory capabilities. This helps balance the traditional strong focus on the supply-side/production sector with a strong focus on the demand side and user needs. In addition, it also reveals more im-

portant factors that may shape the global context in the coming years. **Positive collective visions** are in short supply in a world facing many escalating crises. The challenge lies in that these positive visions may not be apparent to any one stakeholder, and accepting them may require an independent mediator. Supporting the creation of positive visions may well be one of the most valuable public goods governments can provide.

HOW ▪ Diagnostic methods combine gathering evidence with stakeholder discussions and collective imagination. Methods for a system-level diagnosis include system mapping (such as network analysis), policy evaluation inspired by system dynamics (such as causal loop diagrams) or policy reviews with a transformative framing (such as the POINT methodology developed by the Joint Research Centre). To choose the right diagnostic method to try and answer our first question (Where are we now and where can we go from here?), you should first answer the following questions.

1. What is the policy objective of the diagnostic? Link the diagnostic to planned or ongoing processes of policy development and/or reform (e.g. a new innovation strategy).
2. What is the diagnostic approach or method to be used, considering the policy objective?
3. How will the findings of the diagnosis link back to policy development and/or executive decisions?
4. How will the findings of the diagnosis feed into developing a vision?

Smart Specialisation Strategies (S3) are regional innovation strategies established for a more effective use of Cohesion Funds in the 2014-2020 programming period. They became an ex-ante conditionality whereby the design of a smart specialisation strategy (S3) was a prerequisite to access the European Structural and Investment Funds devoted to research, technological development and innovation, and maintained for the 2021-2027 period as a so-called enabling condition. They aim at focusing R&I efforts on a limited number of priorities based on an assessment of opportunities of the regions and full involvement of local stakeholders (mainly business, research organisations and the public sector) via an entrepreneurial discovery process. The S3

experience reshaped the innovation policy process as illustrated below. S3 has promoted a methodical approach to regional economic development. Furthermore, S3 has enhanced participatory governance in the identification of priorities and the overall design, as well as in the implementation of the strategy, leading to a more open, market-oriented and inclusive decision-making process. S3 has led to a cultural change in many regions, territories and Member States. The Smart Specialisation Community of Practice (S3 CoP) is the central node on guidance, networking, support and peer-learning on S3, covering its conceptual development and its implementation in the EU. The S3 Platform (S3P) covers implementation of smart specialisation outside the EU.

ACTIONbook activities

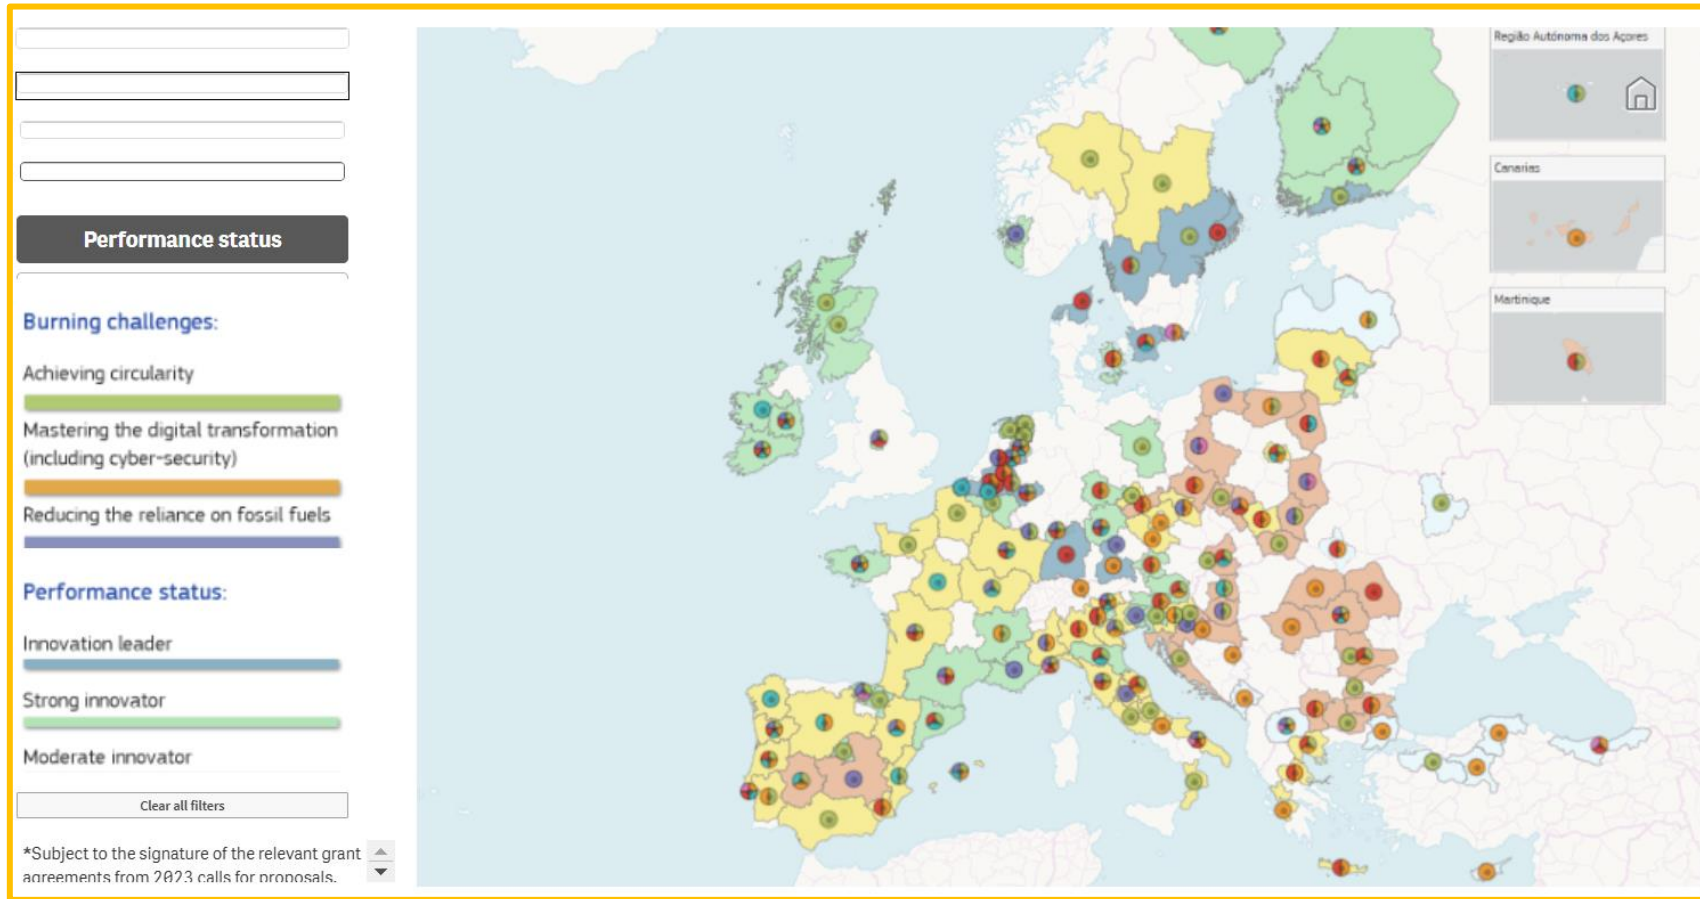

Authors and contacts

EU regions, irrelevant of their innovator-performance level, need to invest collectively with other regions during the next wave of innovation in a highly competitive, volatile and ever-changing geopolitical context. The Regional Innovation Valleys (RIVs) initiative aims to create clusters of regions with different levels of innovation to support the development of a strong and diversified European ecosystem by creating interregional innovation projects including in deep tech innovation, linked to key EU priorities such as food security, energy, health, circular economy, and digitalization as defined in the New European Innovation Agenda (NEIA). RIVs have an ambition to secure the EU leadership in the innovation trend by financing and broadening of the value chain in specific domains. Matchmaking with different partners will benefit access to new talent, knowledge and networks that are fundamental to create a robust innovation ecosystem. RIV is a bottom-up instrument bringing together cohesion and innovation policies, and the lessons to be learnt in this current pilot will be crucial for further design of upcoming calls. This initiative was de-

signed as part of Flagship 3 of NEIA on Accelerating and strengthening innovation in European Innovation Ecosystems across the EU and addressing the innovation divide. RIVs aim to create connections that involve regions with lower innovation performances by building on strategic areas of regional strength and specialisation as indicated in their respective smart specialisation strategies. Until now, the European Commission has launched a Call for expression of interest enabling regions to express their interest to become RIV and work together. In addition, two complementary calls have been launched where the European Commission dedicated EUR 122 million under Horizon Europe (European Innovation Ecosystems) and under the European Regional Development Fund (Interregional Innovation Investments (I3) Instrument). To facilitate matchmaking and interconnections, the European Commission created a Matchmaking Map displaying regional authorities committed to tackle the most burning social challenges, as defined in NEIA.

RIVs: matchmaking map

Where are we now?

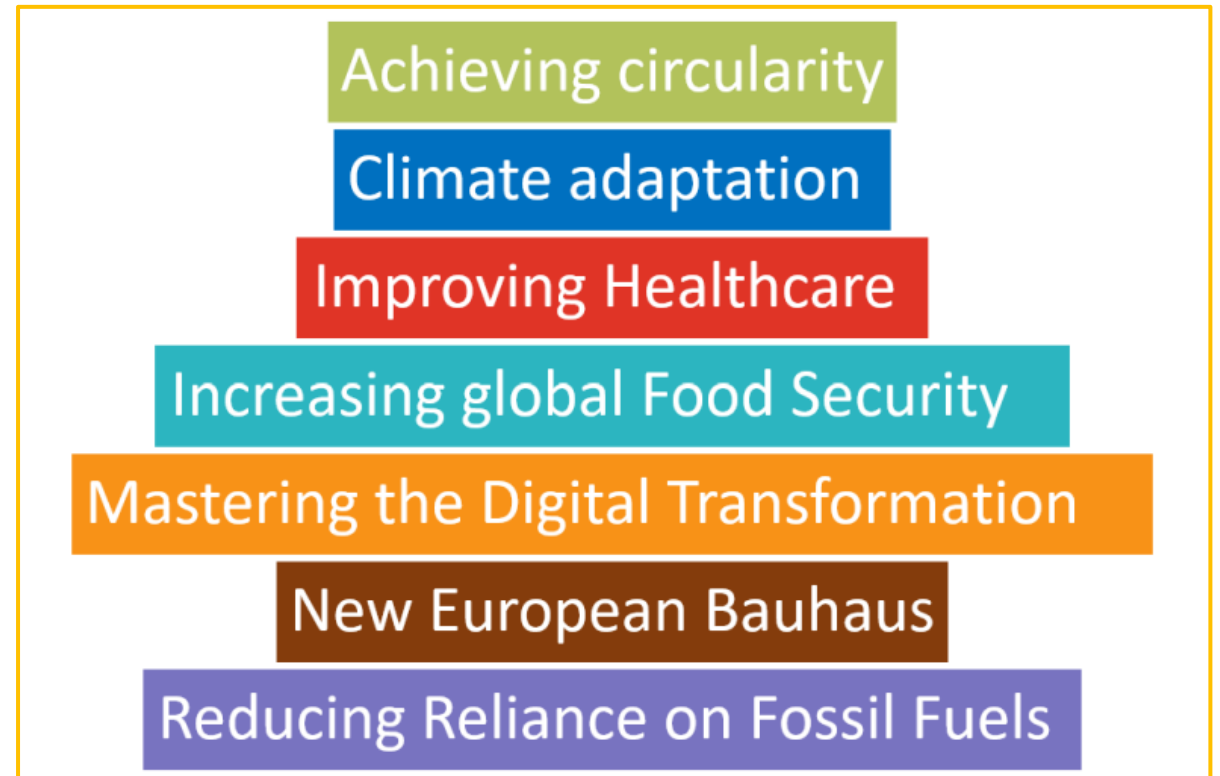

The **Preparatory Action ‘Innovation for place-based transformation’** is dedicated to empowering territories to support policy practitioners through awareness raising, building capacities, and engaging into policy experimentation activities.

EU Preparatory Action: Innovation for place-based transformation

- Partnerships to address urgent global challenges.
- Informing future actions, policies and programmes.

<https://europa.eu/!tkpfQw>

EU Preparatory Action: Innovation for place-based transformation

Call for Expression of Interest

- **Raise awareness** and improve understanding of transformative innovation policies
- Enhance readiness through building **new capacities**
- **Experiment** with the use of innovative approaches

Apply before 16 December 2024
