

Building Interregional Innovation Corridors

Kristina Karanikolova (TNO)

Clusters Meet Regions Eindhoven 2025 – ‘The Brabant Way’, 27 March 2025

Objectives

- A clear idea **why** European Collaboration is important
- Get familiar with the concept, purpose, key elements and evolution of **interregional innovation corridors**
- Diving in **corridor's aim & mission and services**
- Explore: **roles** in fostering collaboration

Agenda

- 1) Why EU collaboration
- 2) Intro to interregional innovation corridors and their elements
- 3) Aim & services: core, informing the corridors
- 4) Roles and your next step

Rules of engagement

- Peers that learn and challenge each other
- Be active – ask questions, examples, challenge anything I say
- Be present – please, no phones or laptops
- Be respectful towards each other

1) Why EU collaboration on innovation?

??

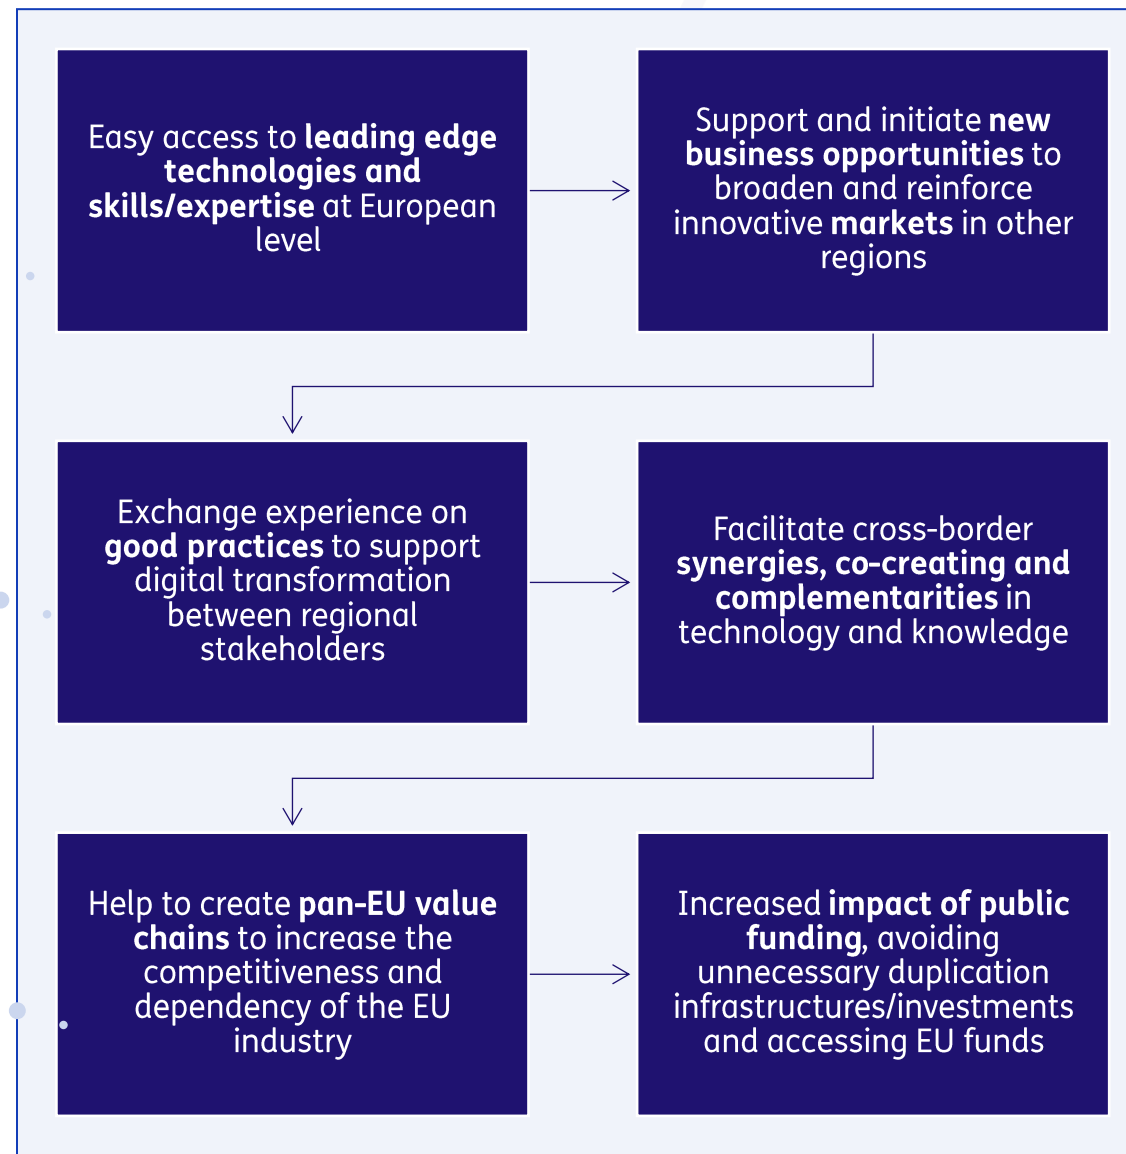

**Who has something to offer and who
would like something from another
region**

??

Why EU collaboration

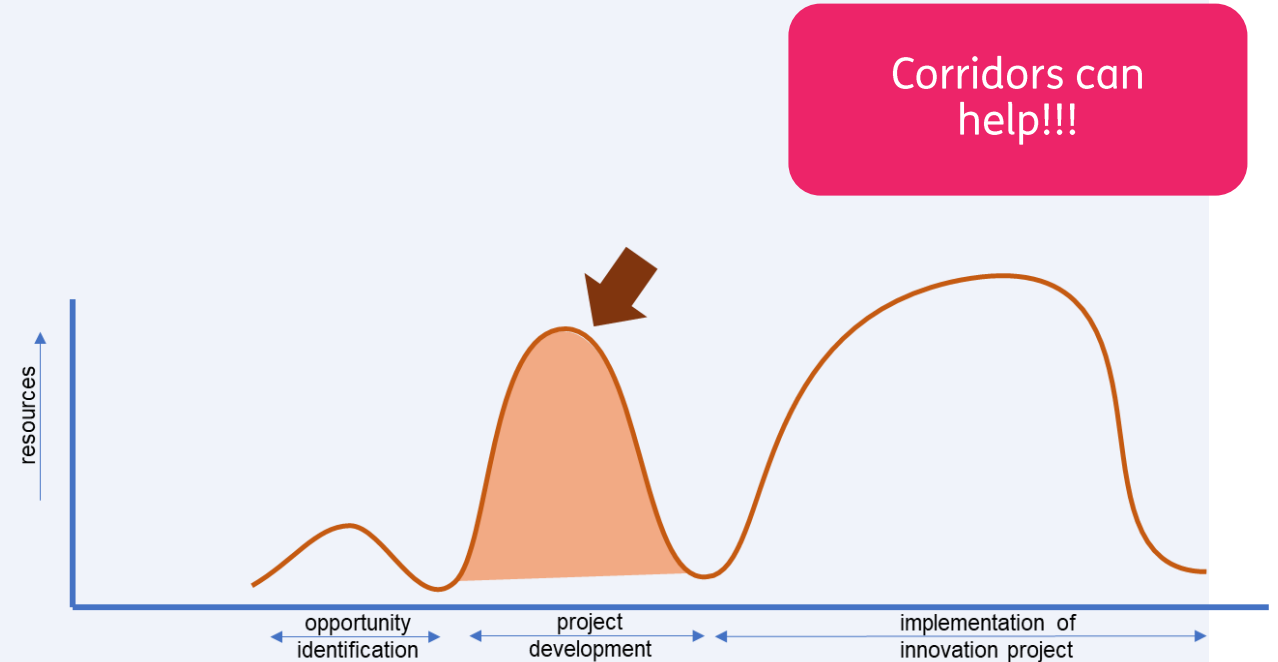

Challenges do not respect borders...
Collaboration isn't a "nice to have"—it's survival!

...but it can be challenging

- **Costly & time-consuming** to forge interregional collaborations (time, resources, funds)
- **Limited ROI** (perceived); not all benefits return equally to the collaborating partners
- Stakeholder focus on **regional** activities and focused on 'selling'
- **Finance** – EU and national programmes stimulating the initiation
-but this is not enough: where is the value in the collaboration

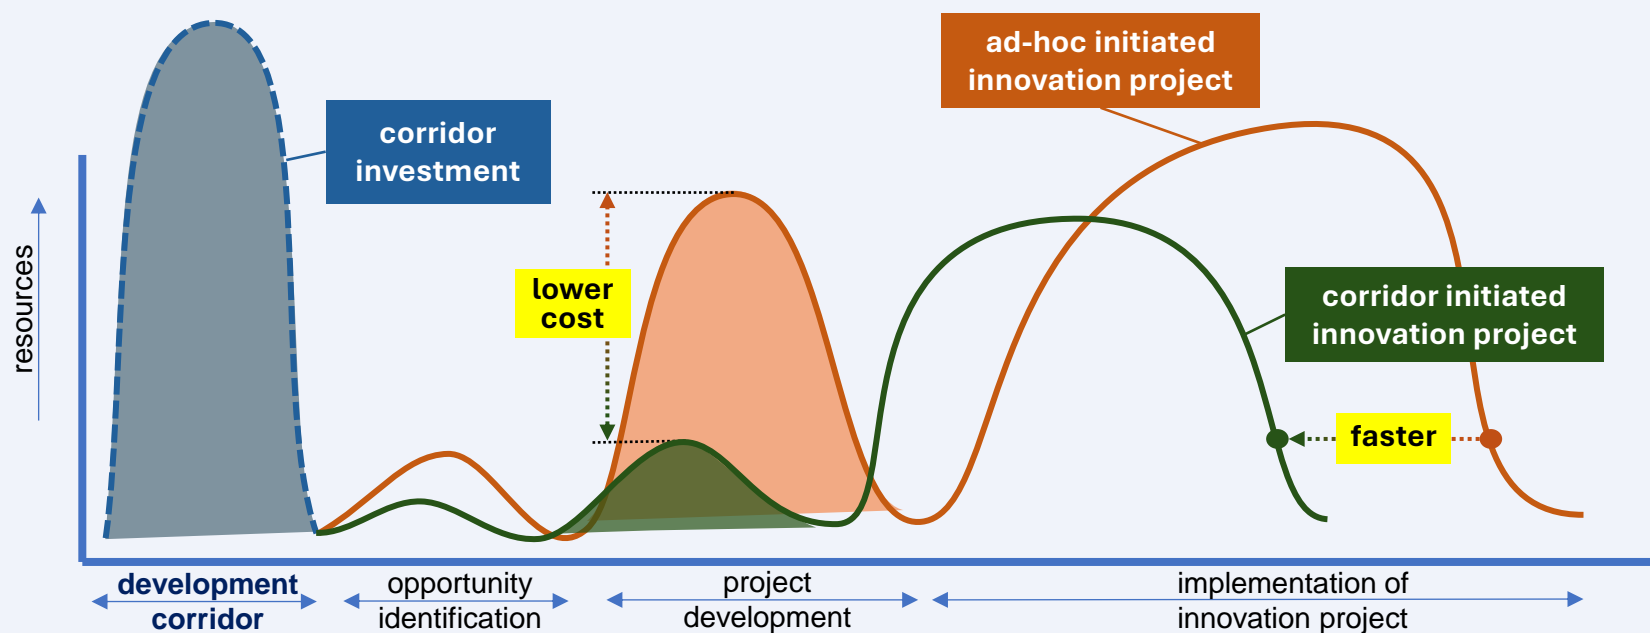

2) Corridors what are these?

Interregional innovation corridors to open opportunities

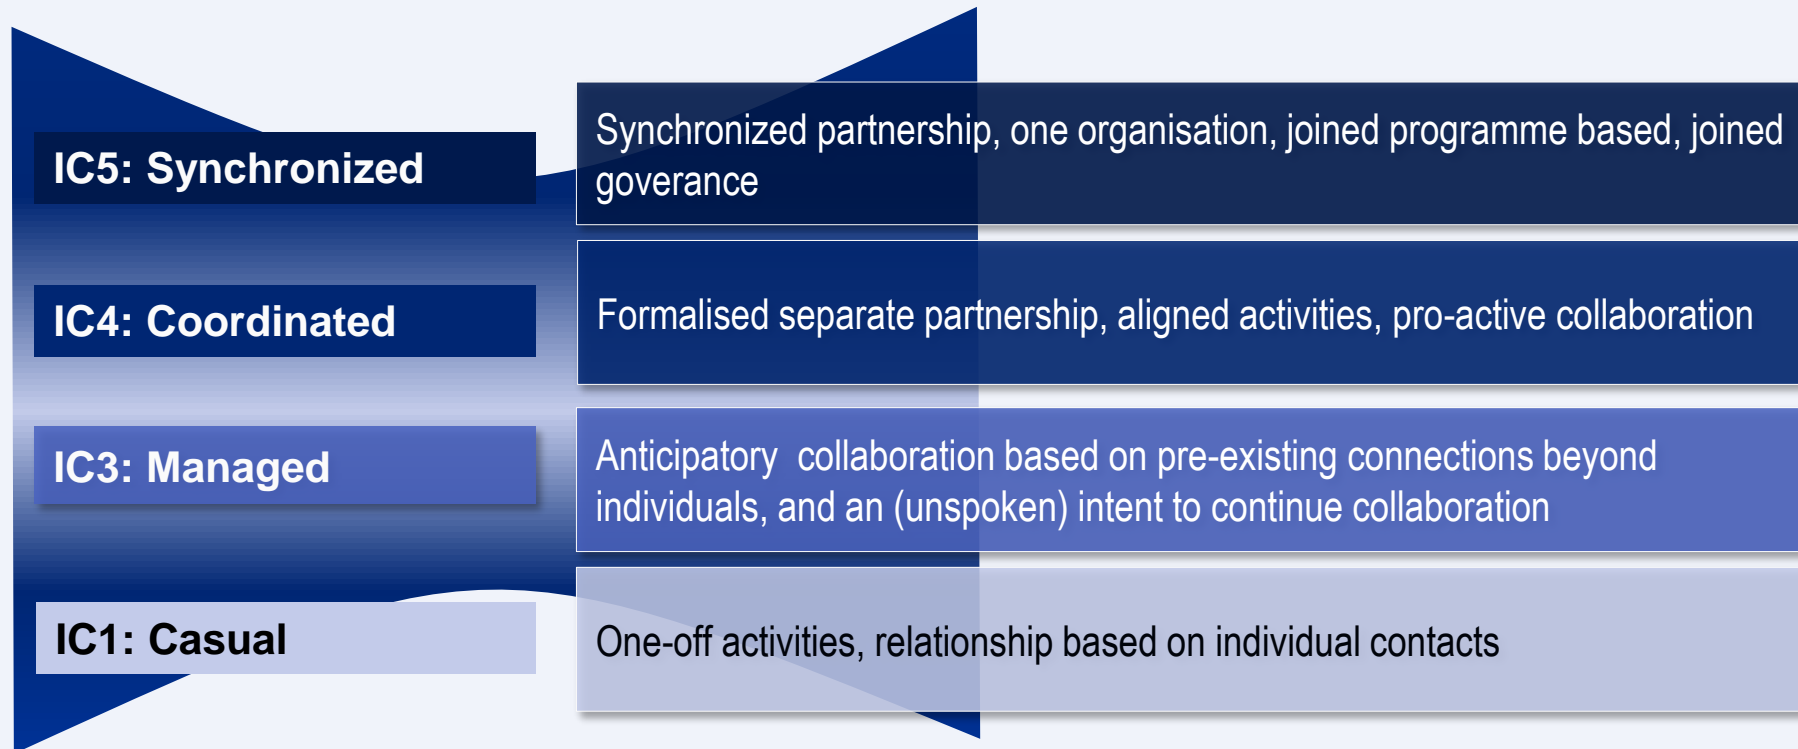

A collaboration between two or more regional orchestrators in different geographical areas, in which continuous exchange of industrial and research capacities/capabilities takes place

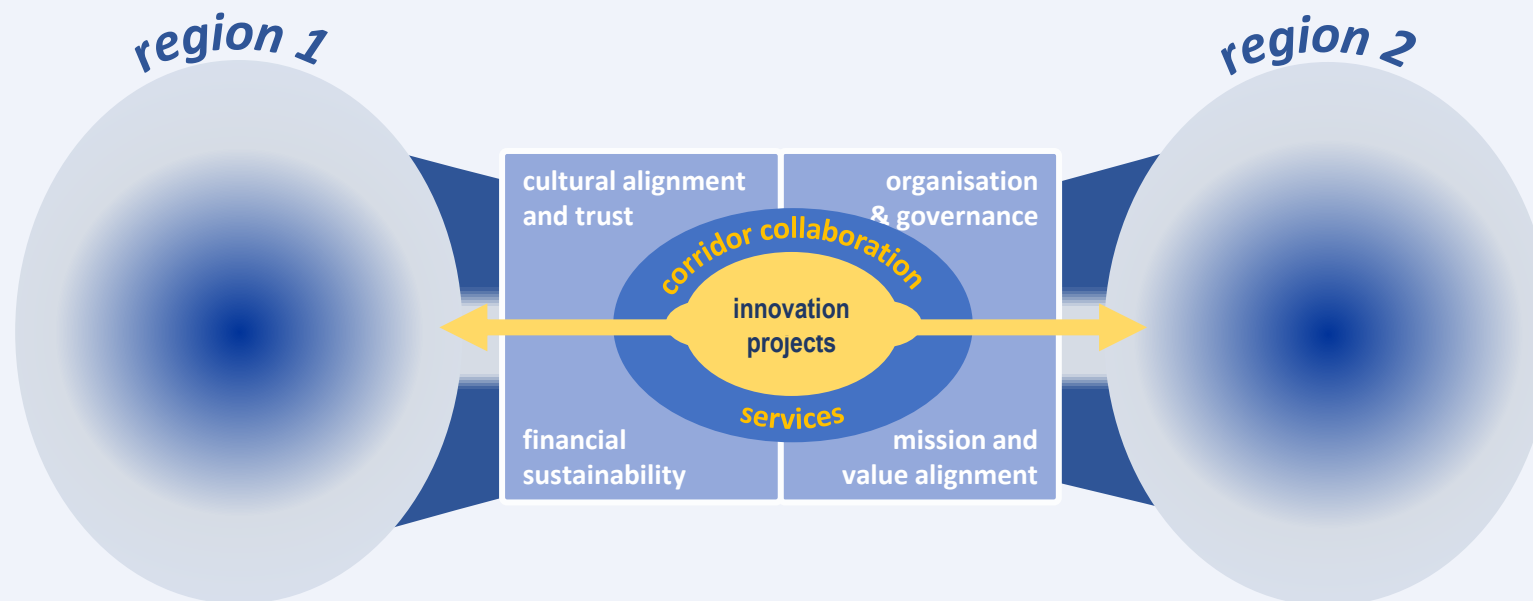

Corridors: to lower costs and speed up EU-collaboration

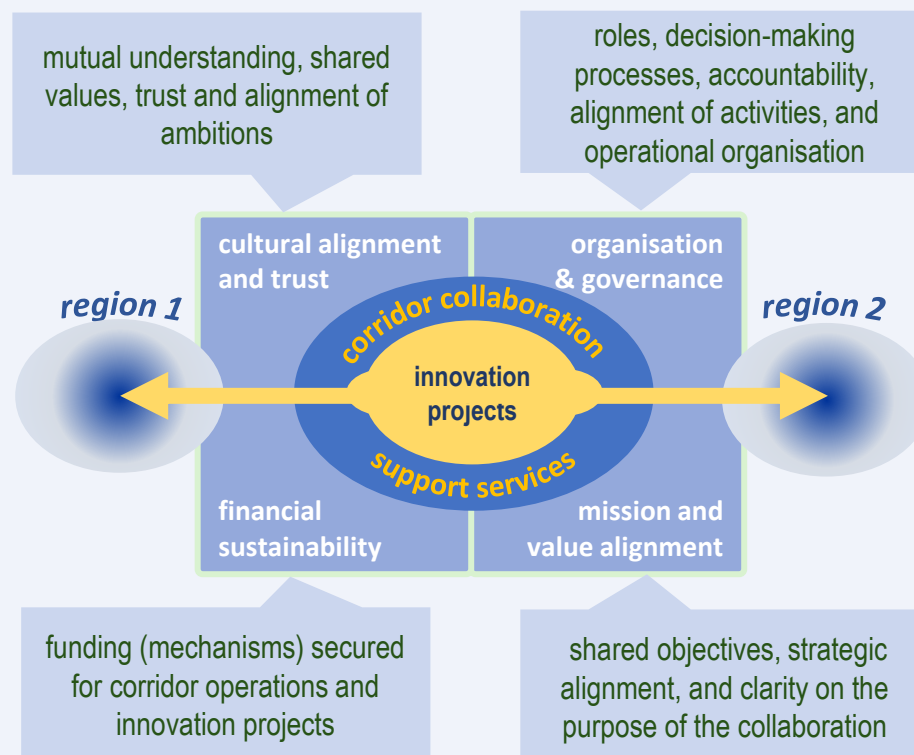

Four intensity levels to match ambition and added value

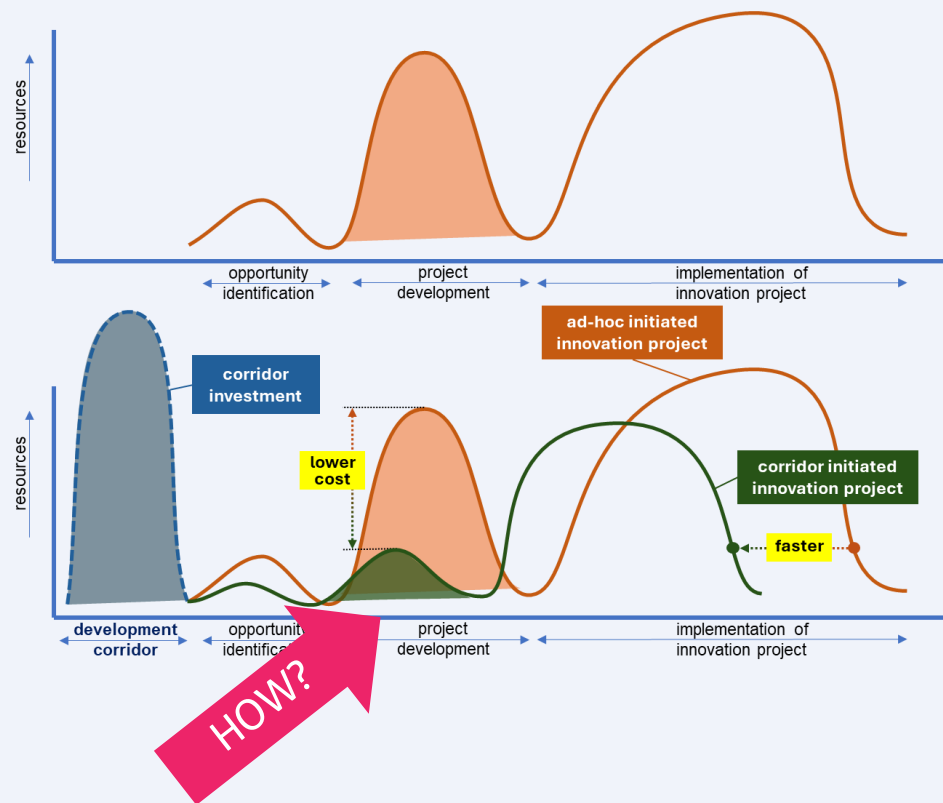

Building blocks to forge the collaboration

Building blocks to forge the collaboration

Exercise: What needs to be developed to lower the barrier to set up innovation project?

Approach:

1. Split in 4 groups in the corners of the room
2. Select a rapporteur and possibly moderator
3. Brainstorm on post-its (5 min): What are elements that need to be addressed to lower the barrier and costs to set up collaborations with regard to 1) aim and mission, 2) corridor services, 3) financing, 4) governance and organization
4. Discuss and cluster/agree on 5 elements (10 mins)
5. Rapporteurs share the outcomes in plenary (5 mins)

Aim and mission: What needs to be developed to lower the barrier to set up innovation project?

- Approach: Add post-it notes, Cluster to 5 elements, report
- Some examples to get you started [do not be limited!]: what are market/user segments to focus on, what is the USP, what are focus areas, etc

Collaboration support services: What needs to be developed to lower the barrier to set up innovation project?

- Approach: Add post-it notes, Cluster to 5 elements, report
- Some examples to get you started [do not be limited!]: what information needs to be shared, what can you do to organize exchanges, etc?

Organization and governance: What needs to be developed to lower the barrier to set up innovation project?

- Approach: Add post-it notes, Cluster to 5 elements, report
- Some examples to get you started [do not be limited!]: who is involved in the collaboration, how are contracts arranged, etc?

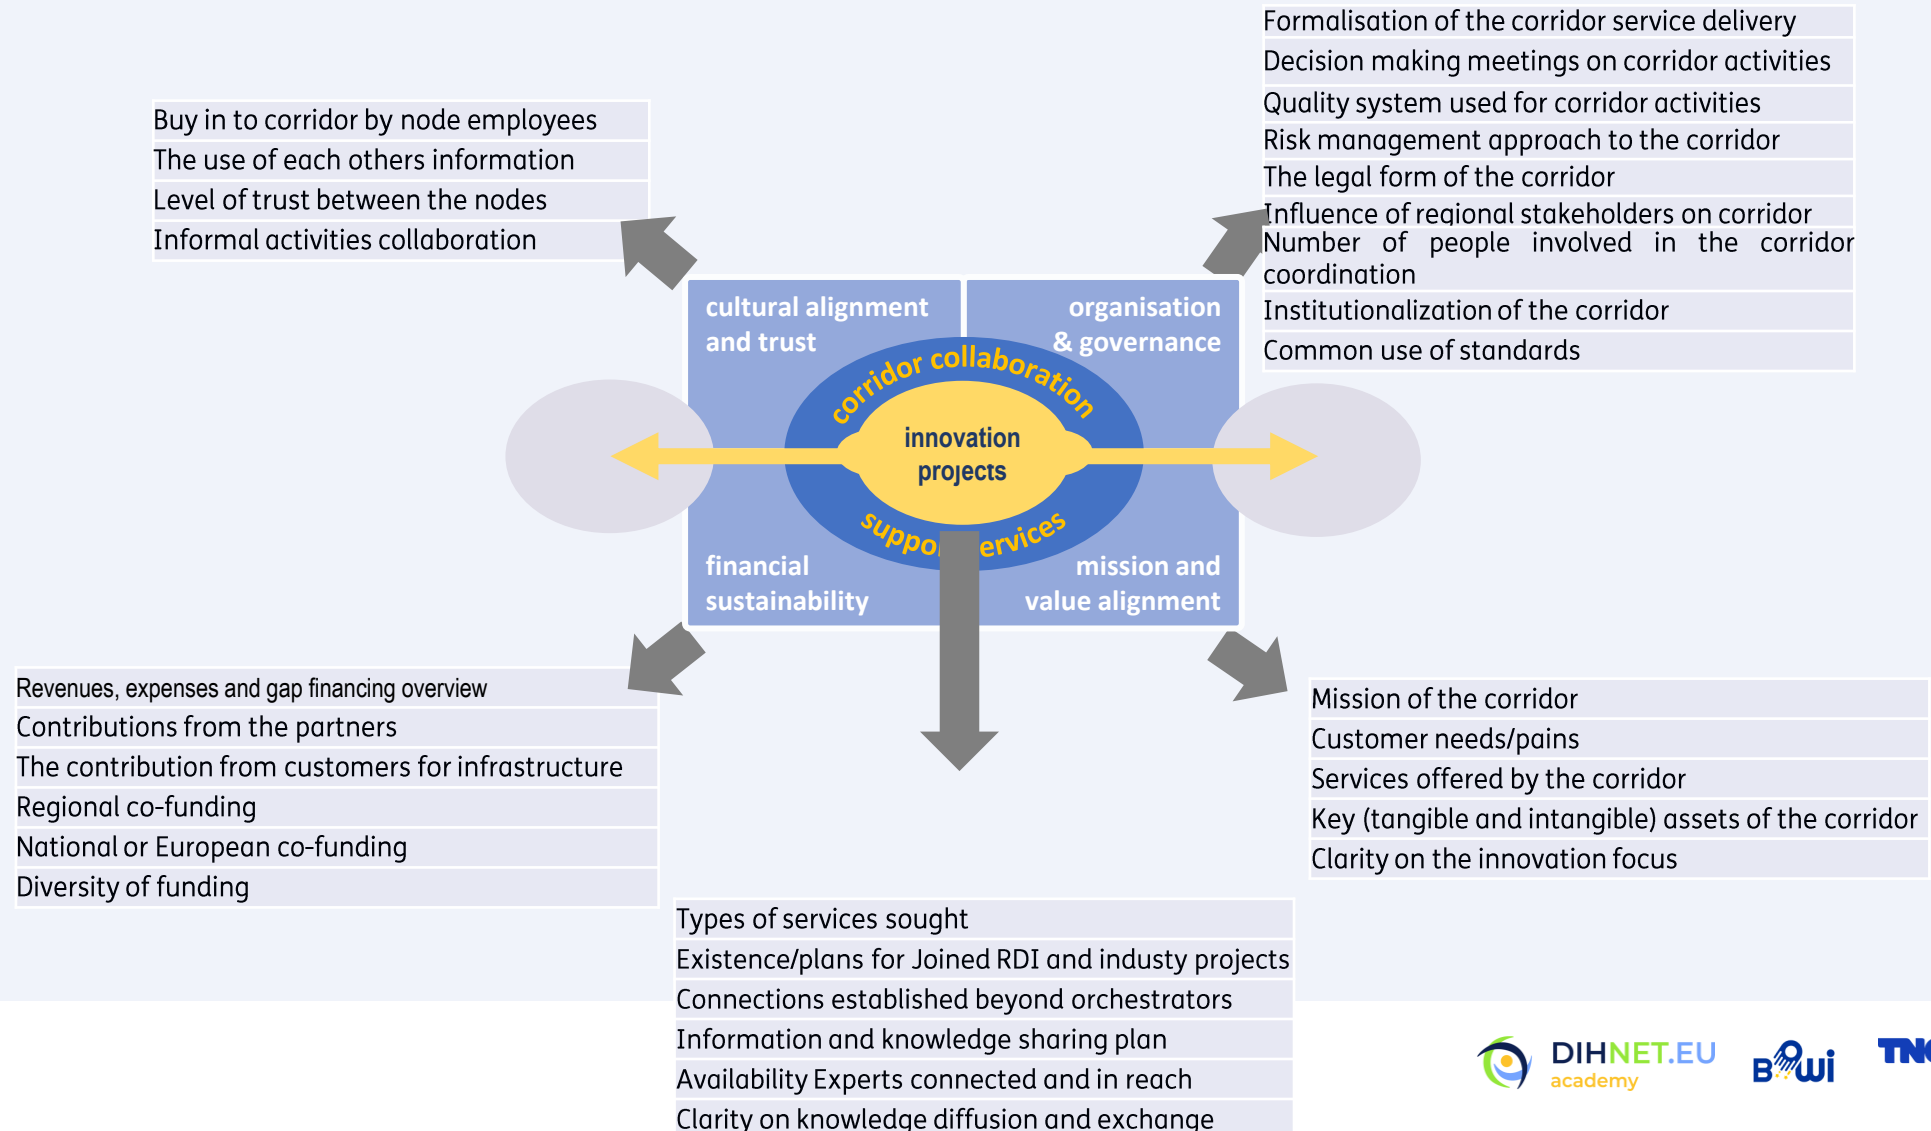

Financing:

What needs to be developed to lower the barrier to set up innovation project?

- Approach: Add post-it notes, Cluster to 5 elements, report
- Some examples to get you started [do not be limited!]: for what is financing needed, what can be paid and what needs public funds, etc

3) Our thinking on aim and services

Some of the elements from our side

Some of the elements from our side

Buy in to corridor by node employees
The use of each others information
Level of trust between the nodes
Informal activities collaboration

Formalisation of the corridor service delivery
Decision making meetings on corridor activities
Quality system used for corridor activities
Risk management approach to the corridor
Legal form of the corridor
Involvement of regional stakeholders on corridor
Number of people involved in the corridor
Formalization of the corridor
Use of standards

DIHNET Academy tool (based on BOWI) available as part of a training

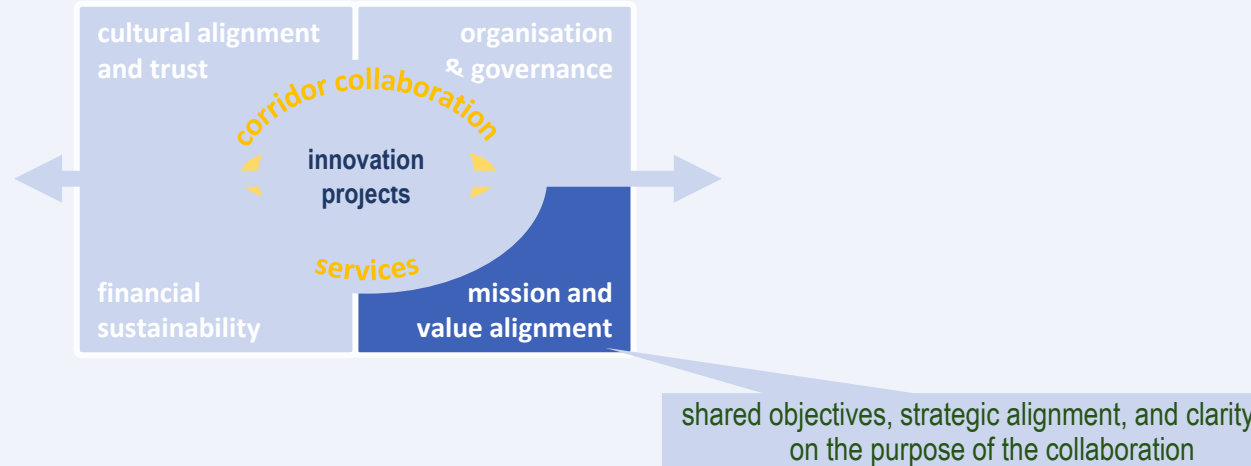

Revenues, expenses and gap financing overview
Contributions from the partners
The contribution from customers for infrastructure
Regional co-funding
National or European co-funding
Diversity of funding

Location of the corridor
Customer needs/pains
Services offered by the corridor
Key (tangible and intangible) assets of the corridor
Clarity on the innovation focus

Types of services sought
Existence/plans for Joined RDI and industry projects
Connections established beyond orchestrators
Information and knowledge sharing plan
Availability Experts connected and in reach
Clarity on knowledge diffusion and exchange

Aim and Mission – defining the type of collaboration

*The **scope and nature** of collaborative activities, the **strategic needs** addressed (partners and customers), and the **types of stakeholders** required to achieve the intended outcomes and as a consequence, the **intensity** of the collaboration*

Four general aims (more and variations possible)

Aim/mission

Research development

Innovation co-creation

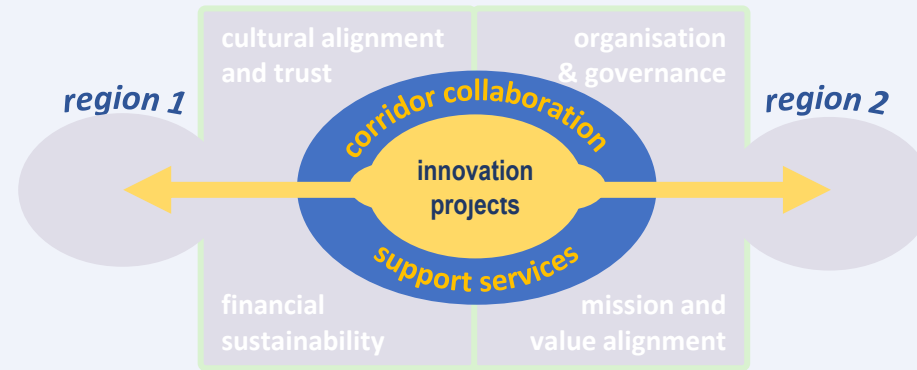

Scaling/uptake

General ecosystem
building

Types of interregional collaboration based on intensity and aim

<i>intensity</i> <i>Aim/mission</i>	Adhoc	Managed	Coordinated	Synchronized
Research development	One-off adhoc research projects	Collaborative projects or informal thematic research partnerships on specific challenge	Integrated programmes, with share/aligned R&D strategies	Collaborative joined, long-term programmes (precompetitive) research
Innovation co-creation	One-off innovation projects with complementarities between research and industrial application	Mid stage group of projects, often in public-private setting	Formal partnerships with aligned aims and plans for innovation support	Long term joined innovation programmes, incl structural activities to support deployment with multiple regional stakeholders
Scaling/uptake	One-off collaborative demonstration projects with clear, separate roles	Informal collaborative set of services and projects supporting scaling, market access etc	Formalized collaborative programs on scaling specific tech	Long-term joined plans and investments alignment on support of scaling, access, etc
General ecosystem building	Opportunistic networking, representation or peer exchange	Ongoing connections with occasional strategic joined positions and activities, peer communities, etc	Collaborative ecosystem frameworks e.g. for joined representation, and joined positions	Connected ecosystems with clear joined activities and dedicated/seconded participation

Service to add value

*The **types of services** to be arranged,
For specific customers and **their pains** and what **assets** are
needed to develop and deploy the services **by whom***

Services: what you do to deliver added value

© TNO 2023

This overview of services aims to provide inspiration for possible types of services and activities which interregional innovation corridors could offer. The list does not necessarily represent the opinion of the European Commission

Overview potential corridor services

	Service	Description	Examples node activities	Examples of corridor activities
Ecosystem	Corridor network building	Creating a structural interregional community, connecting both regional ecosystems	Study/business visits for regional stakeholders Meet and greet meeting Network events on regional ecosystem building Development of ecosystem profile Road-shows Provide content for social media	Organisation of interregional corridor events Side events during EU-conferences Heatmapping and corridor initiation Development of joined tools and templates Road-shows, including policy, industry, research Shared/aligned
	Awareness creation on the corridor	Creating awareness in both regions about the presence of the corridor collaboration	Participation in events Ambassadors for the corridor	Participation in regional events Bilateral visits to governmental representatives Social media presence
	Information exchange	Sharing information about both regional ecosystems and their stakeholders	Publishing opportunities from other region Dissemination of relevant news Facilitation of communication to ecosystem stakeholders	Publishing opportunities from other region Dissemination of relevant news Hosting and maintenance of the information repository Corridor helpdesk
	Joined regional, national and European lobbying	Activities to promote and lobby the corridor partnership in both regions to other regions/countries in Europe, as well as the European Commission	Regional/national events to promote the corridor Bilateral visits to key regional stakeholders to represent the corridor	Creation and support of a lobbying toolbox International event to promote the corridor and the regions Contacting the Commission and participation in key events
Business	Soft-landing support of new companies in opposite region	Support to companies and other stakeholders of one region to create a presence in the other region	Preparational activities for market expansion IPR assessments Incubator support to start-ups from the other region Identification of partners and locations	Legal support for interregional collaboration
	Joined industry/research projects development	Support to create interregional research and innovation projects	Support on developing interregional projects, B2B, R2B, R2R Scouting for project partners	Support on developing interregional projects, B2B, R2B, R2R Expert pool based consultancy Seal of excellence, project evaluations
	Business match-making	One-on-one facilitation of industrial partners to get connected to the market in the other region	Scouting for customers Market assessments Partner/market scouting for start-ups Initiation of partnerships	Scouting for partners Market assessments Initiation of partnerships
	Support to engage in European networks	Support to the regional stakeholders to engage in European activities, including networks and Commission activities	Representation of stakeholders in EU-networks Forging of EU network participation of regional stakeholders	Region introduction to EU networks Providing access to funding from EU-sources Monitoring/identification corridor opportunities in EU-networks Informing about EU activities
Technology	Interregional technology roadmap development	Joined development of technological innovation strategies for the corridor partnership, including their technological alignment	Regional stakeholder participation activities for roadmapping Ecosystem assessment for joined innovation strategy development Creating commitment for established corridor roadmaps/strategies Offering strategic technological expertise to the other regions	Organisation of corridor roadmapping activities Development of templates for corridor innovation strategies Support for pan-EU alignment
	Joined infrastructure investments	Support to align and synchronize investments in innovation on an interregional basis	Discussions with government on corridor investment alignment Support to develop regional investment plans Corridor activation to joined regional investment planning	Development of multi-annual innovation plans Connection to EU-funding opportunities Coaching on corridor investments Providing
	Pooling of shared demonstrators and expertise	Support of the sharing and use of technological infrastructures (research, demonstrators and otherwise) between the corridor regions	Mapping of available infrastructures/expertise in the node Operational business support to make use of infrastructure/expertise Trainings to access the infrastructure	Making available information about the infrastructures/expertise Joined access planning of infrastructures Joined helpdesk on access to the infrastructures/expertise Concept contracting for use of infrastructures/expertise
	Joined technological evaluations of innovations	A joined supporting approach to the evaluation/validation of products and technological feasibility of technologies	Technological evaluations for the other region (based on expertise) Certification of technological products	Seal of excellence on tested technologies Representation in European standardization networks Access to validated technologies
Skills & education	Labor-market exchange facilitation	Supporting the exchange of laborforce between the two nodes	Organisation of secondments	Brokering of secondments, facilitating (short) mobility programmes Host the corridor jobs portal Headhunting
	Educational exchange	The support of exchanging students, professors and other experts for educational purposes	Opportunity scouting for (student) exchange Finding guest professors Guest lecturing and training (workshops)	Legal support for student exchange Organisation of guest professorships Arrangement of student exchange and lecturing Support brokering of lecturing and student exchange
	Peer learning	Exchange of experience and best practices between the two nodes of the corridor	Peer review visits Participation in interregional study visits Good practice sharing Peer learning workshops	Peer review visits Organisation of interregional study visits Good practice sharing Peer learning workshops
	Train-the-trainer	The organisation of trainings to educate experts that can then support the stakeholders in the region	Providing experts to the trainings	Corridor Summerschool Coaching on corridor initiation and consolidation Corridor training programme to regional stakeholders
	Joined training programmes	The joined offering of training and educational activities to the stakeholders of both regions	Providing experts to the trainings The organisation of trainings and other educational activities Marketing of the joined educational activities	Certification of trainings for the interregional partnership Brokering and alignment of joined educational activities

Services: what you do to deliver added value

Overview potential Corridor services

	Service	Description	Examples node activities	Examples of corridor activities

	Joined training programmes	The joined offering of training and educational activities to the stakeholders of both regions	Providing experts to the trainings The organisation of trainings and other educational activities Mediation of the joined educational activities	Corridor Summerschool Coaching on corridor initiation and consolidation Corridor training programme to regional stakeholders Certification of trainings for the interregional partnership Brokering and alignment of joined educational activities

- Meet and Greet
- Joined lobbying

- Soft-landing in opposite region
- Joined industry/research projects
- Business match-making

- Access to facilities/expertise
- Joined technology roadmap development

- Guest lecturing and training (workshops)
- Expert exchange, secondments

5) Roles in setting up the collaboration

Different roles and responsibilities

- Responsibilities: gateway to the local ecosystem, builds and manages the contact with the other region, identifies priorities for the collaboration, ensures buy-in of the collaboration, etc
- Who: (E)DIHs, clusters, regional development agencies, intermediaries

Orchestrator

- Responsibilities: offer the tech expertise and access to infra, identify opportunities for joined/complementary R&D and infra projects, identify strengths and needs
- Who: public and private research and technology infrastructures offering innovation, testing experimentation services

Research, infra and leads

- Responsibilities: Bridges the gap between academia, research, and the practical needs of businesses or industries, articulates needs of local business to counter partners, spells out the collaboration opportunities
- Who: clusters, RDA, accelerators, etc

Business support and accelerators

- Responsibilities: funding, ensures regional policies support the collaboration, connect smart specialization and international collaboration, develop regional strengths and ecosystem
- Who: ministries, regional authorities, municipalities, ..

Policy-makers

- Responsibilities: keep track of EU priorities and opportunities, connect regional needs and strategies with EU stakeholders, networking & contact
- Who: National Contact Points, EIT, reps, EEN reps

Connection to Europe

- Responsibilities: clear offer, availability, identify USP
- Who: tech and service organization offering innovation products and services

Service providers:

- Responsibilities: promote the benefits of the collaboration, Manages media relations, events, and digital campaigns, publishes success stories, etc
- Who: consultancies, marketing and communication specialists, outreach and community managers

Marketing and Communication officers

- Responsibilities: identifying funding sources to support collaboration of projects, financial engineering/matching, overview of instruments
- Who: RDA, policy-makers, consultancies

Funding/financial expert

- Responsibilities: (empty box)
- Who: (empty box)

etc

Speed role networking – 5 mins 😊

??

What role do you want to play?

??

Approach:

- Pair - turn to your neighbor on the left
- Person A: in 30 sec share: 1) What role would you like to play? Why are you essential for the collaboration?
- Person B: Share your role and how this builds on/ complements A's role
- Now turn to the person at the back and repeat!

Epilogue: process to forge the collaboration

If you would like to participate,
show your interest

www.dihnet.eu

Conclusions and reflections

Successful interregional collaboration benefits from a structural approach

And this is not just “doing projects”

But the level depends on the return on investments

Ensure that all “ad-hoc” innovation projects, strengthen your corridor

Align expectations of the corridor and your own expectations and responsibilities

**Interested in building
structural
collaborations?
Let's talk ;)**
