

BIOMAN^{4R2}

Success Story

FINANCIAL SUPPORT PROGRAM

"Implementing a Quality Management System (QMS) in line with ISO 13485 is essential for bringing our disruptive medical technology to the healthcare market. The Business Transformation Financial Support (BTFS) from the BioMan4R2 program is helping us make this critical transformation. With the support of the Medical Innovations Incubator (MII) in Tübingen, we are working to establish an efficient QMS and align our internal processes with regulatory requirements."

RESILIENCE FOR REGIONAL BIOMANUFACTURING AND MEDICAL TECHNOLOGY ECOSYSTEM

"The collaboration between EARLAB and the Medical Innovations Incubator (MII) exemplifies a model for other startups, fostering a culture of knowledge sharing that enhances the resilience of the regional MedTech ecosystem. Through our partnership with MII, we are eager to share our hands-on experience in establishing a Quality Management System (QMS). As a medical device manufacturer, our strong alliance with the University Hospital Tübingen empowers us to drive innovation in clinical research and the MedTech sector, facilitating the transfer of basic research results to patient care."

IMPACT

"The financial support we received has empowered us to implement the necessary Quality Management System (QMS) and integrate regulatory thinking into our company's approach. This enhancement has significantly refined our internal processes, eliminating barriers and mitigating complications related to regulatory requirements and market access. Additionally, it boosts efficiency in the research and development of our products. By preparing EARLAB for ISO 13485 certification, this project has made our company more appealing to investors. "
